Genesys AI Token Calculator User Guide

1. Introduction

Welcome to the Genesys AI Token Calculator! This tool is designed to help you estimate the number of Genesys AI tokens required per month based on your contact center's specific usage across various features. By inputting your voice and digital interaction volumes, along with other AI-powered features, you can generate an accurate forecast of your monthly token consumption and associated costs.

This guide will walk you through each section of the calculator, explaining the purpose of each input field and how the calculations are derived.

---

2. Configuration

This section allows you to set global parameters and enable various token-consuming Genesys AI features.

Global Settings

- **Token Price:** Enter the cost for a single token. The default is **$1.00**. This value is used to calculate the total estimated monthly cost.

- **AI Guide Creation:** Enter the number of AI Guides you plan to create.
    - **1 Token = 1 AI Guide**

Co-Pilot

Enable and configure Co-pilot for your agents. You can choose one of two models:

- **Named:** Check this box for a named user model.
    - **1 Token = 40 Tokens / User / Month**
- **Concurrent:** Check this box for a concurrent user model.
    - **1 Token = 60 Tokens / User / Month**
- **Number of Users:** Enter the total number of named or concurrent users.

Predictive Models

- **Predictive Engagement:** Check the box to enable. Enter the total number of events you expect to process per month.
    - **1 Token = 4,000 Events**
- **Predictive Routing:** Check the box to enable. Enter the total number of interactions you expect to route per month.
    - **1 Token = 17 Routed Interactions**

Supervisor & Virtual Supervisor Co-pilot

- **Summary & Insights:** Check the box to enable. Enter the number of conversation summaries or insights to generate.

    - **1 Token = 50 Summaries or Insights**
- **Translate:** Check the box to enable. Enter the number of agent/customer interactions to be translated.
    - **1 Token = 2 Translations**
- **Scoring (Virtual Supervisor):** Check the box to enable. Enter the number of interactions that require automated scoring/evaluation.
    - **1 Token = 20 Evaluations**

---

3. Voice & Digital Mix

These sections are for detailing the specific voice and digital interactions that will be automated.

Voice Mix

Use this table to add and configure your automated voice interactions.

- **Name:** A descriptive name for the interaction type (e.g., "Billing Inquiry," "Password Reset").
- **Call Length:** The average handle time for the call, in MM:SS format.
- **Calls/Month:** The total number of calls of this type received per month.
- **% Auto:** The percentage of these calls you expect to be fully handled by an AI bot.
- **Selected AI:** Choose the AI type that will handle the automation.

    - **Voice Bot:** Billed based on total minutes used, in 15-second increments.
        - **1 Token = 17 Minutes of Usage**
    - **Virtual Agent:** Billed per automated session.
        - **1 Token = 2 Voice Sessions**
    - **Agentic AI:** Billed per automated session (for more complex, goal-oriented tasks).
        - **1 Token = 1 Voice Session**

Digital Mix

Use this table to add and configure your automated digital interactions (e.g., chat, messaging).

- **Name:** A descriptive name for the interaction type (e.g., "Order Status," "FAQ Bot").
- **Avg # Turns:** The average number of back-and-forth exchanges (one user message + one bot response = 1 turn) in a typical interaction.
- **Interactions/Month:** The total number of digital interactions of this type per month.
- **% Auto:** The percentage of these interactions you expect to be fully handled by a bot.
- **Selected AI:** Choose the AI type for the automation. The token calculation is based on "bot flows," where 1 bot flow consists of 8 turns.
    - **Digital Bot:**
        - **1 Token = 51 Bot Flows (408 turns)**
    - **Virtual Agent:**
        - **1 Token = 2 Bot Flows (16 turns)**

    - **Agentic AI:**
        - **1 Token = 1 Bot Flow (8 turns)**

---

4. Understanding the Results

This section provides a summary and visual breakdown of your estimated token consumption.

Token Distribution Dropdown

- **Selected:** This view shows the token calculation based on the specific AI types you chose in the Voice and Digital Mix tables.
- **Lowest Cost:** This view automatically calculates the most cost-effective AI type for each interaction and displays the resulting token distribution. This is useful for optimizing your spending.

Token Distribution Chart

This bar chart visually represents the total number of tokens required for each enabled AI feature.

Results Panel

- **Tokens:** Displays the total estimated tokens and their associated monthly cost based on the **Token Price** you set.
- **Unused Capacity:** When you purchase tokens, you are buying blocks of usage (e.g., 17 minutes for a Voice Bot token). This section shows the "leftover" capacity from

your purchased tokens. For example, if you use 18 minutes of Voice Bot time, you will consume 2 tokens (17×2=34 minutes), and this panel will show you have **16 minutes** of unused capacity. Highlighting unused capacity in red can help identify opportunities for further automation without additional cost.

---

5. AI Cost Comparison Charts

For each interaction you add to the Voice and Digital Mix tables, you can see a direct cost comparison between the available AI models.

1. Select an interaction from the **Select Interaction** dropdown menu in the "Voice AI Cost Comparison" or "Digital AI Cost Comparison" card.
2. The bar chart will update to show the monthly cost for handling that specific interaction's automated volume with each of the three AI types (e.g., Voice Bot vs. Virtual Agent vs. Agentic AI). This allows for quick, granular optimization decisions.

---

6. Token Consumption Quick Reference

Feature	Unit of Measurement	Consumption Rate (Units per 1 Token)
Voice Bot	Minutes of Usage	**17** Minutes

Feature	Unit of Measurement	Consumption Rate (Units per 1 Token)
Virtual Agent (Voice)	Voice Sessions	**2** Sessions
Agentic AI (Voice)	Voice Sessions	**1** Session
Digital Bot	Bot Flows (8 turns each)	**51** Bot Flows
Virtual Agent (Digital)	Bot Flows (8 turns each)	**2** Bot Flows
Agentic AI (Digital)	Bot Flows (8 turns each)	**1** Bot Flow
Co-Pilot (Named)	Users / Month	**40** Tokens / User
Co-Pilot (Concurrent)	Users / Month	**60** Tokens / User
Predictive Engagement	Events	**4,000** Events
Predictive Routing	Routed Interactions	**17** Interactions
AI Guide Creation	Guides	**1** Guide
Summary & Insights	Summaries or Insights	**50** Summaries/Insights
Translate	Translations	**2** Translations
Scoring	Evaluations	**20** Evaluations

Export to Sheets

Save this as a pdf

Show thinking

As an AI, I can't directly create and save files on your computer. However, you can easily save the User Guide as a PDF yourself using your browser's print function. It only takes a moment.

Here are the instructions for the most common browsers (like Chrome, Edge, Firefox):

How to Save as a PDF

1. **Press** Ctrl + P on Windows or Cmd + P on a Mac to open the print dialog box.
2. Look for the **"Destination"** or "Printer" field.
3. Change the destination from your physical printer to **"Save as PDF"** or **"Microsoft Print to PDF"**.
4. Click the **"Save"** button.
5. Choose where you want to save the file on your computer and click **"Save"** again.

That's it! You will have a perfectly formatted PDF of the guide.

Here is the full content of the User Guide again for you to save.
